Profile

Software developer with four years of building and running production systems, and an ICT teacher at Moyeni High School. I design and build secure, data-heavy web and mobile applications with Laravel, React and React Native, from the database and APIs to the screens people use. My work includes **OYA Insuretech**, a multi-tenant insurance platform used for thousands of policies; **WaiPlanner**, an AI lesson-planning and assessment platform built around Eswatini's EGCSE, JC and CBE syllabi and used by 261 educators; and an MTN MoMo payment-gateway integration for Lusito Hub. I started coding in 2018, before AI coding tools existed; today I build with AI agents (Claude Code, Codex, Kimi) and LLM APIs daily, reviewing every change before it ships. Teaching means I know assessment from the classroom side as well as the code side.

Key strengths

- ✓ **Web and mobile applications**
  Laravel 12, PHP 8, React with Inertia, React Native with Expo and TypeScript.
- ✓ **Secure development**
  Security hardening, role-based access, tenant isolation, expiring tokens, audit trails, 2FA.
- ✓ **DevOps and production support**
  Git, GitHub, PHPUnit, Supervisor queue workers, Ubuntu, DigitalOcean, incident diagnosis.
- ✓ **Education and assessment**
  ICT teacher (IGCSE/EGCSE, CBE); built syllabus-aligned assessment with human verification.
- ✓ **APIs and integration**
  MTN MoMo payment gateway, versioned REST APIs, OAuth 2.0 / OpenID Connect, SMS, the OpenAI API.
- ✓ **Databases**
  MySQL/MariaDB schema design, a double-entry ledger, reporting, query tuning, data migration.
- ✓ **AI engineering and agentic development**
  Claude Code, Codex and Kimi agents daily; LLM APIs, vision and structured extraction in production.
- ✓ **Independent delivery**
  Plan, build, test and ship releases across several live products alongside teaching.

Software development experience

OYA Insuretech

Sep 2022 – Present

Full-stack product developer, multi-tenant insurance platform | **oyainsuretech.com**

- Built and maintain a live platform that insurers use for policy administration, claims, invoicing, a double-entry ledger, reporting, SMS campaigns and an agent portal, with **thousands of policies** in production.
- Designed tenant-aware data access and role permissions, with separate sign-in flows for staff, clients and corporate users and **two-factor authentication** for super-admins.
- Designed a **versioned client REST API** with scoped, expiring Sanctum tokens, rate limiting and audit trails; it powers the React Native client app.
- Cut one page load from **3.8 s to 0.3 s** by removing N+1 queries and tuning pagination; handled bulk imports and legacy-data migration.
- Run deployments and background workers on Ubuntu and DigitalOcean, diagnose production incidents and ship ongoing releases backed by PHPUnit tests.

Stack: Laravel 12, PHP 8.4, React 18, Inertia 2, Tailwind CSS, MySQL/MariaDB, Sanctum, PHPUnit, Ubuntu, Supervisor, DigitalOcean

WaiPlanner

2026 – Present

Creator and developer (own product) | **waiplanner.waidone.com**

- Built and launched an AI lesson-planning and assessment platform aligned to Eswatini's EGCSE, JC and CBE syllabi: **261 educators** and **1,073 lesson plans** across 32 subjects (November 2026).
- Turns uploaded exam papers and marking schemes into assessments through structured LLM extraction; AI-drafted questions **cannot be published until a teacher verifies them**.

- Runs timed assessments with a live monitor and one-tap extra time, and AI-assisted marking of typed and handwritten answers, with rubrics for essays.
- Implemented Google sign-in (OpenID Connect), school workspaces and roles, subscriptions and payouts, validated syllabus imports and queued AI jobs with daily limits.

Stack: Laravel 12, PHP 8.5, React, Inertia, OpenAI API, queue workers, automated tests, DigitalOcean App Platform

Chosen Generation
2022 – Present

Developer and IT support

- Software development and maintenance, system administration and technical support for the organisation.

Lusito Hub
2026

Payment integration and security developer

- Integrated the **MTN Mobile Money (MoMo) payment gateway**, enabling mobile-money payments on the platform.
- Carried out **security hardening** of the platform to protect payment transactions and user data.

Scopehost
2022 (7 months)

Full-stack developer

- Worked across the database, back end and user interface of a membership management system.

MC Tech Systems
May 2021 – Dec 2021

Full-stack developer and IT support | **Mbabane**

- Developed web applications and handled system administration, installations, troubleshooting and support.

Teaching experience

Moyeni High School
Current

ICT teacher

- Teach ICT at senior secondary (IGCSE/EGCSE) and junior secondary level (CBE, Grades 8–9).
- Plan lessons, set and mark assessments against national syllabi, and prepare candidates for external exams.

Selected projects

OYA client app (React Native, Expo, TypeScript). Nine-screen app with token sign-in and live insurance data.

Eswatini Creator Connect (Laravel, React, TypeScript). Early-stage creator and brand marketplace with an escrow ledger.

Written before AI, 2021–2022 (Laravel, PHP, MySQL, Tailwind CSS). A savings and loan management system in Laravel (2021), plus a Laravel job board, a PHP/MySQL social network and a Tailwind landing page on GitHub (July–August 2022).

Technical skills

Languages	PHP, JavaScript, TypeScript, SQL, HTML5, CSS3
Frameworks	Laravel 12, React 18, Inertia 2, React Native, Expo, Tailwind CSS, Alpine.js, Bootstrap
Data	MySQL, MariaDB, schema design, query optimisation, migrations
APIs and security	REST, OAuth 2.0 / OpenID Connect, MTN MoMo payment gateway, Laravel Sanctum, role-based access control, two-factor authentication, rate limiting, audit logging, security hardening
DevOps and tools	Git, GitHub, PHPUnit, Supervisor, Ubuntu Linux, DigitalOcean App Platform, queues
AI engineering	Agentic coding with Claude Code, OpenAI Codex, Kimi and ChatGPT; LLM APIs (OpenAI), prompt design, structured extraction, vision models, human-in-the-loop review, usage limits, AI monitoring
Transferable to .NET	MVC, ORM, DI, middleware and background jobs map to ASP.NET Core and EF Core

Education

STD in Information and Communication Technology
2018 – 2021

Eswatini College of Technology | **Mbabane**

Self-study: W3Schools courses in HTML, CSS, JavaScript, PHP, Bootstrap and AJAX.

Languages

English and siSwati, full professional proficiency
